

SERIES 100  
METERS AND  
ACCESSORIES

REGISTER EXTENSION  
Model 146  
(Formerly Model 246)

PDS-146  
Issue Date: Nov. 1987  
Supersedes: May 1980

This rigid extension is suggested for pit or other installations to raise the register clock to a more convenient level for reading and servicing. The extension is coupled directly to the meterhead, replacing the original register clock. Installation can normally be completed in the field without removing the meter from the line. The original register clock is relocated on top of the extension.

To order an extension, simply specify the distance requested on the above drawing. For existing installations, the meter serial number must be specified also. Not suitable for Masterflo Models. Consult factory.
