## TigermagEP

### Obstructionless

### Electromagnetic Flowmeter

#### Description

The TigermagEP is a microprocessor based electromagnetic flowmeter designed to measure the flow of conductive liquids in full pipes. The sensor and transmitter are integral and enclosed in a NEMA 7 explosion-proof housing. The sensor housing is made of steel.

A wide variety of liner and electrodes are available to tailor the meter to operate in many processes.

The Tigermag's nonvolatile EEPROM memory and circuitry eliminates the need for a microprocessor backup battery. It is not necessary to reprogram if the electronic module is replaced or exchanged with electronics from another size flowmeter.

#### Certified Accuracy

Each FM656 is 'wet-flow' calibrated in Sparling's Primary Flow Lab traceable to the National Institute of Standards and Technology (NIST).

#### Principle of Operation

Sparling magnetic flowmeters are based on Faraday's Law which states that the voltage induced in a conductor moving through a magnetic field is proportional to the velocity of that conductor. Accuracy is minimally affected by changes in temperature, pressure, viscosity, or conductivity.

#### Applications

The Model FM656's high signal frequency makes it ideally suited to applications with high levels of inherent noise including: Process Chemicals, Heavy Slurries, Polymers, Acids, Alkalies, Sewage, Cooling Water. Nearly any conductive liquid can be measured.

#### Features

- Sampling frequency up to 100Hz for accurate measurement of fluids with high levels of inherent noise.
- Forward, reverse and net totalization
- Programmable high and low flow alarms
- Nonvolatile EEPROM Memory
- Universal electronics module compatibility
- 2-Line, 16 character backlit display
- Programming made easy with Mag-Command™
- Low Flow Cutoff
- NEMA 4X/NEMA 7 explosion proof enclosure
- Accidental Submergence (NEMA 6/IP67), Permanent Submergence (NEMA 6P/IP68) and Direct Burial Sensors available
- Approvals Include: FM, CSA and NSF 61
- Rotatable Modular Display
- Empty pipe detection
- PZR - Positive Zero Return
- Standard 0.5% Accuracy
- Sizes available from 0.1" - 72"

## Installation

The meter must be mounted at a point in the line which is always full of process liquid under flowing conditions.

A minimum of three diameters of straight pipe length are required from the center of the meter to normal obstructions to obtain specified accuracies.

The meter may be equipped with the following flanges: ANSI 150 or 300#, AWWA, DIN, PN 10 or 16, JIS or British Standard.

## Easy To Read Backlit Rotatable Display

The 16 character, 2-line backlit Totalizer display is rotatable 360° in 90° increments ensuring easy reading in any orientation.

## Nonvolatile EEPROM Memory

A backup battery is not required and there is no need to reprogram if the electronics module is replaced or exchanged. Meter identification (tube ID, serial number, K, offset, etc.) is stored on an EEPROM chip independent of transmitter electronics. The EEPROM chip has lifetime data retention.

## Empty pipe detection

The Sparling TigerMagEP is designed to detect absence or inadequate volume of process fluid in the pipe and will hold the output signal to 4mA or zero. This feature does not require any hard wiring as it is a software selection. One of the most important values of this feature is that it prevents false totalization possible with other meters under partially filled pipe conditions.

## Ease of Communications

The TigerMagEP is programmable with Mag-Command, Modbus or Hart Protocol. 4-20mA, RS-232 or RS-485 outputs give you flexibility when interfacing with your distributed control system.

## Hi-Z Circuitry

The Sparling TigerMagEP provides superior performance in liquids which tend to deposit nonconductive coatings. Hi-Z circuitry produces a high input impedance to the transmitter's preamplifier ( $1 \times 10^{12}$  Ohms). The impedance of the coating is negligible as compared to the impedance of the receiving instrument. The voltage drop across the electrode coating is also negligible eliminating the need for electrode cleaners.

## Remote Mounted Transmitter

Remote mounting of the transmitter is required when pipe vibration is excessive, when flooding is possible or where high temperature conditions exist (over 100°F).

The TigerMagEP remote transmitter is housed in a NEMA-4X enclosure and features a larger sized (8mm) 16 digit 2-line backlit display. All power, coil, and electrode connections are made within the transmitter enclosure and junction box. The meter is programmed using Mag-Command. Hall-effect switches which are energized from outside the enclosure. The enclosure can be wall mounted. An optional bracket for pipe mounting is available.

## Grounding

The use of grounding rings is recommended to ensure accuracy. Grounding rings are required if adjacent piping is lined or nonconductive. Pump noise or excessive RF should be minimized to achieve highest accuracy.

## PZR - Positive Zero Return

An electronic circuit is activated by an external contact closure when lines go empty or when a pump or valve is shut down, indicating to the meter that it should drive the output signal to 4mA or 0.

## Removable Electrodes

Two configurations of removable electrodes are available in sizes of 6" or greater for all FM656 meters. The first configuration allows removal of the electrode after the line has been depressurized and drained. Removal is performed with an 11/32" nut driver and a 3/4" socket wrench.

The second is the "hot-tap" electrode which allows electrode replacement while the system is still under pressure without disturbing the process flow. Removal can be easily performed with a phillips screwdriver and a crescent wrench. Special locking catches were designed to prevent high pressure accidents during electrode removal. The shut-off valve must be closed before the electrode may be removed.

## Two flow alarms

Fault alarms can be configured with alarm set points between 0-99% of flow for each alarm. Open collector output turns on above programmed set point.

## Flow Rates & Dimensions

Meter Size (in)	Dimensions (in)								Flow Rates (GPM)		
	A		B		C		D		1 fps	3 fps	33 fps

Please call factory for dimensions shipped July '16 and before

## Standard Specifications

<b>Accuracy:</b>	0.1" - 0.25": $\pm 1\%$ of flow (1fps - 33fps) 0.5" - 72": $\pm 0.5\%$ of flow (1fps - 33fps) ( $\pm 0.25\%$ of flow available upon request)
<b>Temp Effect</b>	$\pm 0.025\%$ FS/ $^{\circ}\text{C}$
<b>Full Scale Ranges:</b>	From 0fps - 3fps to 0fps - 33fps
<b>Repeatability:</b>	$\pm 0.1\%$ of full scale
<b>Electrodes:</b>	316 SS Standard (others available)
<b>Liner:</b>	Hard Rubber, Polyurethane, Ceramic, FEP/PTFE, Polyurethane- liner for potable water certified to NSF61
<b>Outputs:</b>	1) Isolated analog 4mA - 20mA DC into 800 Ohms 2) Scaled Pulse 24VDC with selectable 12.5/25/50/100 ms on time, max.freq. 60Hz 3) 0Hz - 1000Hz Freq., for 0%-100% of flow rate, 15VDC 4) Two flow alarms 5) Fault, with open collector 6) RS232 communication 7) Flow direction with open collector 8) Positive Zero Return (PZR) for external relay contacts. Outputs 2 and 3 can be open collector if required. 9) HART Protocol Available 10) Modbus Protocol Available
<b>Mag-Command™:</b>	Selection and change of meter parameters by magnetic probe without opening the enclosure.
<b>Display:</b>	2-Line, 16 Digit alphanumeric backlit display (rate and total). Modular, rotatable 360° in 90° increments
<b>Min Velocity<sup>1</sup>:</b>	0.3fps
<b>Power Requirements:</b>	77-265VAC/12-60VDC
<b>Power Consumption:</b>	Less than 20 W
<b>Enclosures:</b>	Cast aluminium epoxy coated. Integral NEMA 7 encl. or Remote NEMA 4X encl.
<b>Sensor Housing:</b>	Fabricated steel, epoxy coated
<b>Preamp Impedance:</b>	$1 \times 10^{12}$ Ohms minimum
<b>Amb. Temp:</b>	-20°F - 140°F (-29°C - 60°C) Display darkens over 158°F (70°C)
<b>End Connections:</b>	150# or 300#
<b>Sensor Tube:</b>	304 Stainless Steel
<b>Process Temp:</b>	<b>Integral Mount:</b> <ul style="list-style-type: none"><li>• Hard Rubber, Neoprene, Polyurethane, Food Grade Polyurethane: -40°F - 180°F</li><li>• TEF, Ceramic: -40°F - 212°F</li></ul> <b>Remote Mount (opt):</b> <ul style="list-style-type: none"><li>• TEF, Ceramic: -40°F - 266°F</li></ul> <b>High Temperature Coils (opt):</b> <ul style="list-style-type: none"><li>• TEF: -40°F - 300°F</li><li>• Ceramic: -40°F - 420°F</li></ul>
<b>Selectable Damping:</b>	0-99 seconds
<b>Minimum Conductivity:</b>	5 $\mu\text{siemens}$
<b>Low Flow Cutoff:</b>	Selectable 0-9% of full scale

<sup>1</sup> Minimum Velocity is the lowest velocity the meter will show a reading. Accuracy, however, is subject to the limits above.

Model FM656 Specification available on request
